

Consultation Services

Need Safety or Environmental Consultation?

Scope of Service:

Platinum Engineering & Safety looks forward to the opportunity to help you with all of your safety needs. We would be happy to customize a safety or environmental compliance program to meet your operational goals. Our goal is not to come into your operation with a canned presentation, but instead to direct our focus on the specific risks that apply to your work environment. We will assist your team in gaining the knowledge they need to prevent injury and environmental risks, as well as teach them what to do in case of an accident. Providing this knowledge to your employees is not only mandated legally in many cases, but we feel that we also have a moral obligation to arm our employees with the knowledge needed to operate a safe jobsite for themselves, their families, their colleagues, and their trade partners.

We recognize that our clients not only require answers to their questions, but also seek direction on ways to anticipate problems before they arise.

Objective:

- To encourage a safe work place for you and your employees- You show your employees that you value them when you make their safety a priority.
- Improve your Return-on-Investment- By integrating safety into the production process you avoid costly delays and loss of productivity.
- Control costs- A safer workplace means fewer accidents and fewer claims, which result in a lower insurance premium. It also reduces or eliminates OSHA or MSHA fines and penalties.
- Preserve Your Company's reputation- A good workplace reputation is vital for your standing in the community and your brand name.
