

Confined Space Entry

Confined Space Entry Training

Course Description:

Confined Space training is a "Big Deal", and every one of your employees working in and around a confined space needs to understand the hazards that may be found inside that space; if not, they risk lives! This training course is designed to increase the students knowledge of hazards associated with confined space entry and their environment, and it identifies current standards governing permit-required confined space entry procedures. We utilize a hands-on approach to the proper operation of certain testing instruments, and explain their limitations. In addition, we will describe and demonstrate appropriate ventilation practices, personal protective equipment utilized, and discuss the emergency procedures that are necessary for entry into permit confined spaces.

Course Objective:

This training is designed to enable personnel to safely perform confined space responsibilities, as an Entrant, Attendants, and Entry Supervisor. This training will enable workers to respond to confined space emergencies. Training includes the proper use of non-entry rescue equipment to make safe entries into permit required confined spaces.

Course Length:

4 hours - Introduction/Awareness

6 – 8 hours- Classroom w/hands on entry and rescue demonstration

Target Audience:

- Supervisors
- Foremen
- Safety Administrators
- Employees who work in or around confined spaces.
