

Fall Protection

Fall Protection

Course Description:

This course is designed to train your associates as part of a "total solution" in fall protection. There is no fall protection equipment, regardless of how effective, that can save an employee who is not trained in its use. To meet this crucial requirement, Platinum Engineering & Safety will provide the knowledge and skills necessary to achieve a safer, more productive work environment.

Students will learn about falls in the workplace and preventative measures to avoid falls. We will also teach the requirements to have fall protection, how to develop a fall protection plan, and how to inspect and maintain fall protection equipment.

Course Objective:

This course gives you a basic understanding of OSHA's role in prevention and elimination of work-related fall injuries. We will also teach the OSHA standard for fall protection. Upon completion of this course each participant will understand how to identify and evaluate fall hazards, and prevent fall injuries.

Course Length:

2 hour: Identification of fall hazards/Selection and use of fall protection devices.

4 hour: Above plus analysis and application of the OSHA standards.

Target Audience:

- Employees with risk associated with falling
- Managers
- Supervisors/Foreman
- Safety Administrators
