

Powered Industrial Trucks & Forklift Training

Powered Industrial Trucks & Forklift Training

Course Description:

In many of today's facilities forklifts and other powered industrial trucks are indispensable tools. However, the same hardworking qualities that make industrial trucks so helpful- power & strength- can also make them dangerous. Industrial trucks can inflict a great deal of damage and cause major injury when not operated properly. Although most Powered Industrial Trucks and Forklifts have four wheels just like our cars and trucks, they operate very differently. Each year thousands of workers are injured or killed due to improper operation of these highly specialized pieces of equipment.

Our training addresses the unique characteristics of these machines, along with the care and maintenance required, and the rules of the road.

Course Objective:

This program is designed to provide your employees with the equipment specific training needed to comply with OSHA's powered industrial truck standards. Successful completion of this course will prepare and educate your employee on the importance of the pre-trip inspection, how to ensure operator safety, load limitations and load balancing, proper driving techniques, and maintaining vehicle stability.

Course Lengths:

4 hours: classroom training

8 hours: classroom training with a hands-on driving training

Target Audience:

- Operators
- Warehouse Employees
- Safety Administrator
